

Float Tree Bracket and Float Holders

STF-106FTB Float Tree Bracket - STF-FHPB Float Holder - STF-FHHW Float Holder

STF-106FTB Float Tree Bracket

The float tree bracket easily attaches to the inside of any pump chamber riser and accepts standard 1.25" and 1.50" sch. 40 PVC pipe as the float tree. It can be used on any system requiring floats for pump control and alarms. The bracket holds the float tree pipe securely at the top, while the bottom rests on the tank floor. The pipe can easily be removed from the float tree bracket eliminating the need to enter hazardous space to install, adjust and inspect floats. It keeps all floats and wiring away from the effluent pump to eliminate float hang-ups and it keeps the pump discharge pipe and filter clear of floats, wires and straps for easy pump removal.

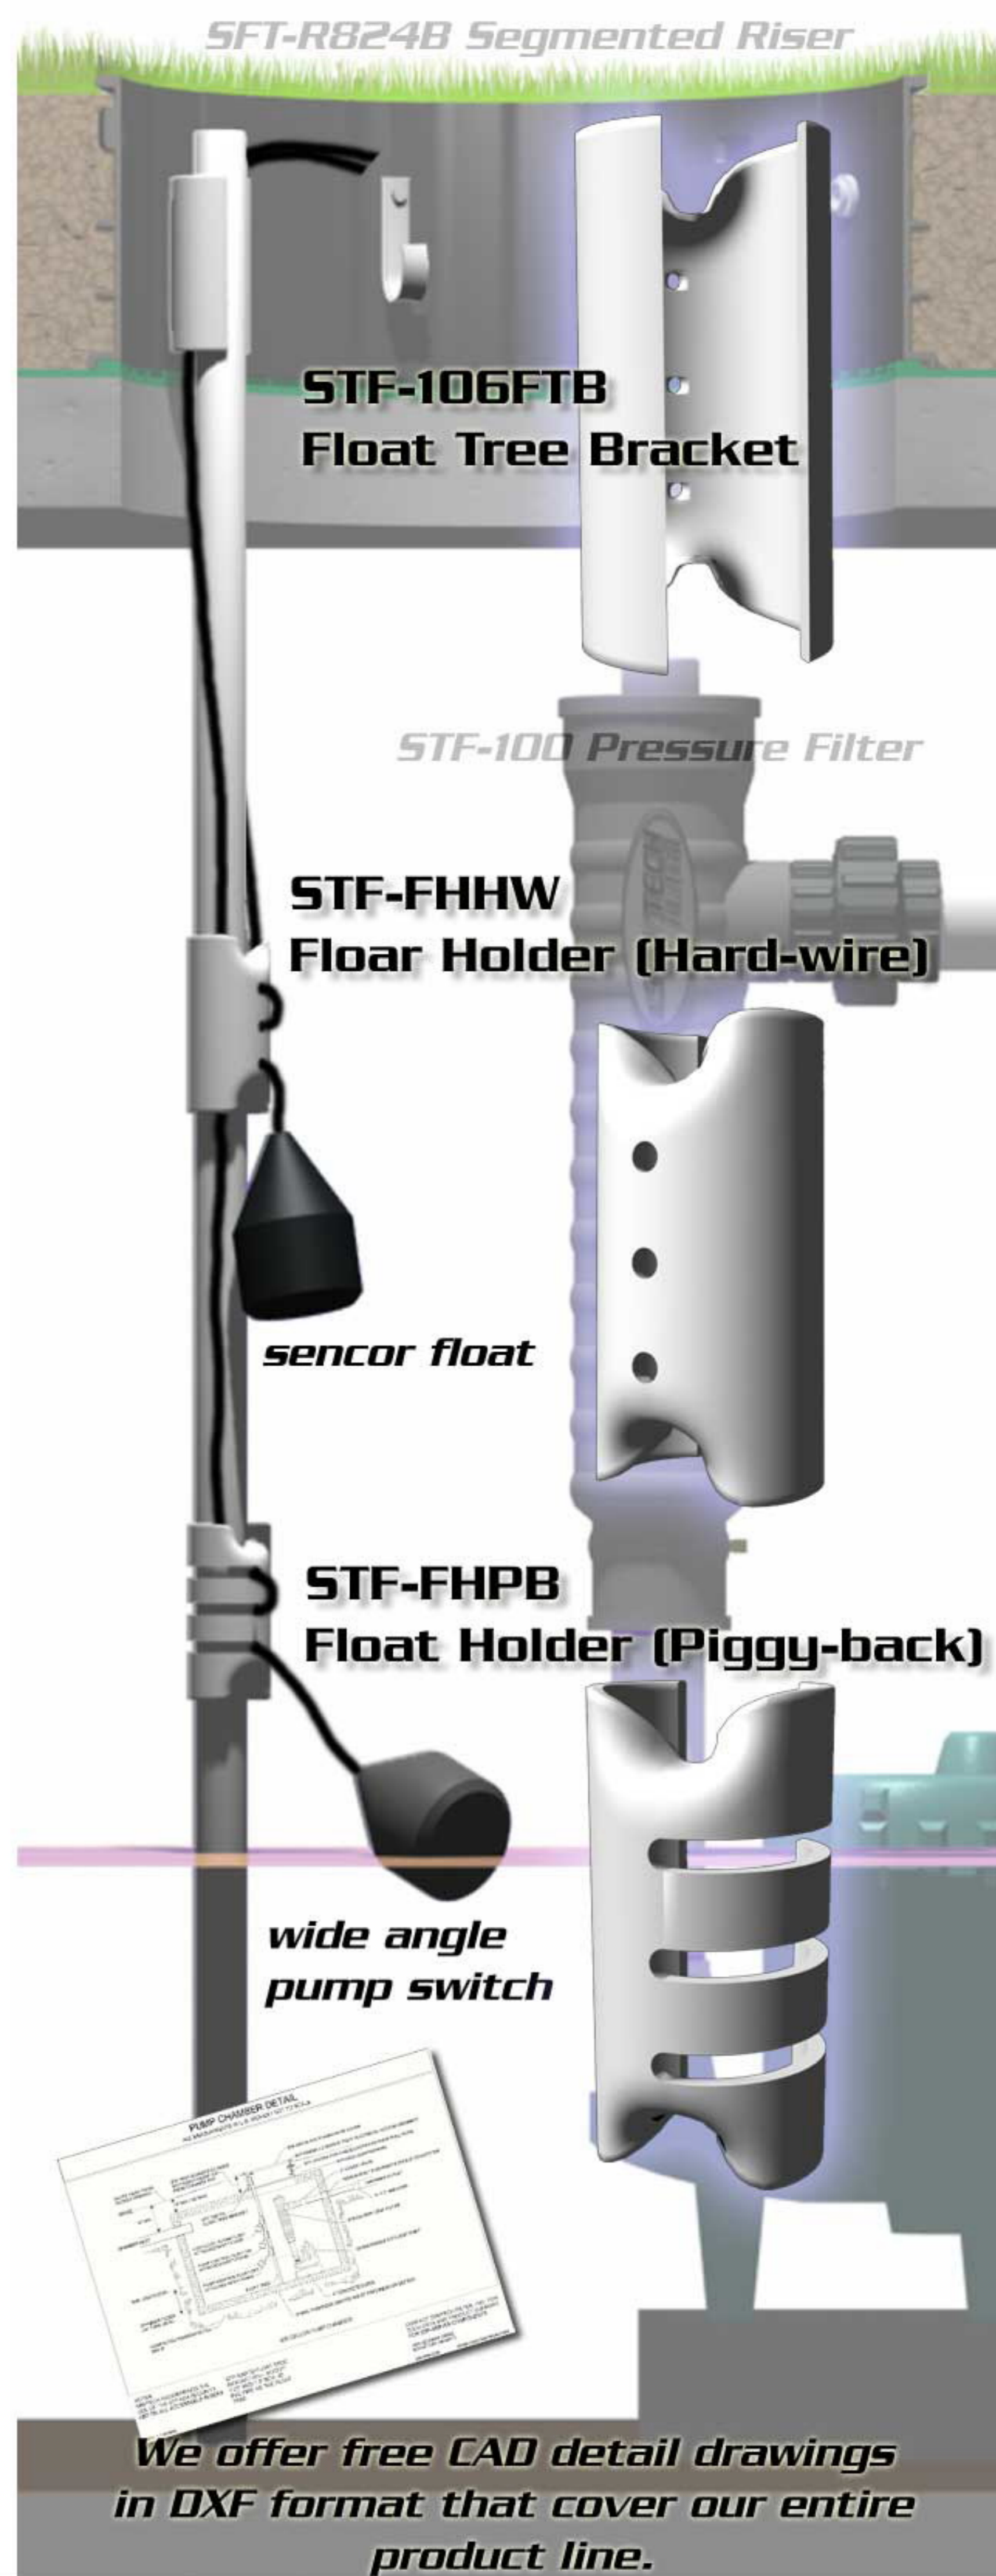

STF-FHHW Float Holder - *Hard Wire*

The float holder clamps firmly over the float tree pipe eliminating the need for straps. Its design holds it in place securely but allows for easy float level adjustments and rotation. The float holder has three holes, the float wiring is threaded through these holes to hold the float position. This design allows for hard-wire installations when the float wiring can be threaded through these holes. The float holder also allows for easy organization of float wiring, cables can be run under the float holder which keeps them close to the float tree to virtually eliminate tangled wires and float hang up.

STF-FHPB Float Holder - *Piggy Back*

The float holder firmly clamps over the float tree pipe eliminating the need for straps. Its design holds it in place securely but allows for easy float level adjustments. The slotted design accepts piggy-back installations when the float wiring can't be threaded through holes. The float holder also allows for easy organization of float wiring, cables can be run under the float holder which keeps them close to the float tree to virtually eliminate tangled wires and float hang up. The STF-FHPB can be used in place of STF-FHHW.

All three products are made of sch. 40 PVC and are 4-13/16" in length. Pre-packaged float tree kits are available.

We offer free CAD detail drawings in DXF format that cover our entire product line.
